

## Patent Application of Larry E. Davis for a "Locking Leveling Support Legs for Wheelbarrow".

Page 2 Of 2

What is claimed:

1. A leg means (17,18A,18B,13) for providing leveling support for a wheelbarrow resting on otherwise un-level terrain, comprising;
  - 2 a leveling and locking, cradle leg member (17) depending substantially down and skewed laterally left to right from center undercarriage of wheelbarrow and,
  - 3 said leveling and locking cradle leg member having left and right feet portions (18A, 18B) substantially spaced apart from each other touchable to ground support and,
  - 4 said leg member being swivel-ably mounted thereon an axle (15) at said center point of said undercarriage of said wheelbarrow with said axle passing through a vertically oriented elongated slot (14) in a yoke member (16) with,
  - 5 said leg member having a toothed locking portion (13) meshable with a fixed locking pin (12) at said wheelbarrow undercarriage, and,
  - 6 said meshable locking of said toothed locking portion against said fixed locking pin will occur;
- (a) when said wheelbarrow is sequentially lowered toward resting position, the feet members (18A,18B) will first contact and graduate to slope of ground, indexing said toothed locking portion (13) than;
- (b). as said wheelbarrow is further lowered resting locking pin (12) affixed thereunder said wheelbarrow undercarriage will mesh into indexed toothed locking portion (13) of cradle leg support member (17) whereby,
- (C) said wheelbarrow undercarriage will be held at level of support manually released.
